

## Battery De-Sulfater Warranty

Battery De-Sulfater will restore the normal action in the cells of lead acid batteries 100% of the time if the batteries are mechanically sound but are just sulfated (mechanically sound meaning batteries that still barely work and that do not have a cracked and / or broken plate or connection and that the battery plates are not totally used up.

If your 12-volt battery is below 11 volts, 8-volt below 7 volts or your 6-volt battery below 5 volts then you must replace the battery because you have a dead cell. Battery De-Sulfater works every time in any mechanically sound battery.

Please follow the instructions on the website [www.thermoil.com](http://www.thermoil.com)  
Click on De-Sulfator Equalization Instructions at top of home page.
